EMG/NERVE CONDUCTION TESTS

You have been reoffered for an EMG/Nerve Conduction test to further evaluate your complaints. These neurological tests are commonly performed to further evaluate complaints of pain affecting various parts of the body. These include but are not limited to neck, mid-back, low-back and extremities. Complaints usually consist of numbness and tingling sensations radiating into various parts of the body. These tests can determine if there is a “pinched” nerve including but not limited to peripheral neuropathy.

This test is performed by a board certified physician with specialized training and interpretation of the EMG/Nerve Conduction test. A full report of the EMG/Nerve test findings will be forwarded to the referring physician within a couple of days of your test.

Prior to your scheduled test please inform the doctor of any other medical condition such as any recent fractures, pace makers, pregnancy, metal implants or any other condition which may require specialized attention. Please inform your doctor of any current medications you may be on, which include but are not limited to blood thinners.

On your test day dress attire should be loose fitting clothes, such as shorts, sweat pants and a T-shirt. You may eat your normal meals at their usual times. Avoid tobacco and caffeine products 2 hours prior to testing.

If you should have any questions please call our staff at Multicare Health Center.
